

# MEASURE & MANAGE SUSTAINABILITY PERFORMANCE

Easy, digital, decentralised.

For all kinds of organisations.

Field-tested.

How sustainable is your organization, how social? Are the production processes **CO2-neutral**? The **web-based software ESG Cockpit** provides a convenient way to find out: Within a short time, you have data at hand to fulfill **reporting obligations**, obtain **certifications** and communicate your **sustainability strategies**.

This way, you stay **future-proof** and navigate through times of crisis **resiliently**.

### ***Your sustainability report – simply created digitally***

No data chaos, no isolated solutions:

With the ESG Cockpit, **collecting sustainability data** and **automatically creating individual sustainability reports**, e.g., according to **NFI guidelines**, is easy.

**Reporting & management** according to all common standards such as **ISO14000, EMAS, GRI, CDP, AWK, GHG Protocol (climate balances)**, including **SDGs** and **common good economics**. Integrate CSR strategically into your corporate culture!

- Analyze **future viability**
- Find **optimization possibilities**
- **Set goals**
- **Monitor the implementation**
- **Communicate results**
- **Obtain certificates easily**

### ***For all forms of organizations***

The tool is configurable for different application requirements by the users and therefore suitable **for small as well as large companies and organizations**.

Examine the entire organization, HR areas or downstream/**upstream chains** – identify potential savings in a variety of ways. Observe the way towards your targets.

*Numerous companies and organizations as well as public administration institutions use ESG Cockpit.*

- **Web-based or in-house**
- **Emission factors integrated and updated**
- **Indicators are calculated**
- **Benchmarks for years, time series, locations, projects, scenarios, products, ...**
- **Interfaces for own data, sources and systems**
- **Configurable input, configurable output**
- **Input data synchronously used for outputs according to several standards**

### ***On the pulse of time – towards CSRD***

The ESG Cockpit is updated on an ongoing basis according to the upcoming sustainability trends and topics.

For this purpose, we cooperate among others **with the Austrian Federal Environment Agency**. Together, **we keep an eye on all key figures and (legal) developments around sustainability**.

We are in constant contact with ESG-Cockpit consultants and users incorporating new ideas and requirements.

*We can also help you clarify the question of where and how your sustainability activities can be subsidized or financed.*

## The ESG Cockpit performance portfolio

### Standard modules

The ESG Cockpit includes **all common and currently relevant guidelines and sustainability reporting standards**. These standards can be combined as required and then largely synchronously used – no parallel work!

<b>GHG</b>	<b>Carbon footprint</b> as a start toward climate friendliness – Scope 1, 2, 3
<b>GRI</b>	<b>Global Reporting Initiative</b>
<b>EMAS</b>	<b>Eco Management and Audit Scheme</b>
<b>WMC</b>	<b>Waste Management Concept</b>
<b>NFRD</b>	<b>Non-Financial Reporting Directive</b> (AT: NaDiVeG, DE: CSR-RUG)
<b>CGE</b>	<b>Economy for the Common Good</b> (compact or full balance sheet)

### The practical control tool for the evaluation of your CSR data

Greenhouse gas balancing is included in nearly all modules and basically follows the rules of the GHG Protocol

<b>CDP</b>	<b>Carbon Disclosure Project</b>
<b>SDG</b>	<b>Sustainable Development Goals</b>
<b>TAX</b>	<b>EU Taxonomy Regulation</b>
<b>SBTi</b>	<b>Science Based Targets *</b>
<b>SCM</b>	<b>Supply chain management *</b>
<b>CSRD</b>	<b>EU ESRS Reporting *</b>

\* SBTi, SCM & CSRD currently implemented

### Functional add-ons

- **Workflow mechanisms** with release, check and deadline or reminder function
- Calculate ecological **“backpacks”** (e.g., Water Backpack, Ecological Footprint)
- **Activate other language:** Currently available in **German and English**, other languages on request
- **Documentation and evaluation of measures and their implementation**
- **Projections, scenarios, target paths and their communication to users**

### Services

- **Consulting, training:** Introduction to software and topic of sustainability management; setup/configuration; support of initial implementation; data input, analysis and interpretation; team and stakeholder training
- **Analysis of data collection requirements & data structures**
- **Support in data management** and development of **individual interfaces**
- **Individual reports**

### Individually configurable in the web and in-house version

Discover how the ESG Cockpit can support you:  
[esg-cockpit.com/en/arrange-a-presentation](https://www.esg-cockpit.com/en/arrange-a-presentation)

### Service with a lasting effect for an optimal workflow

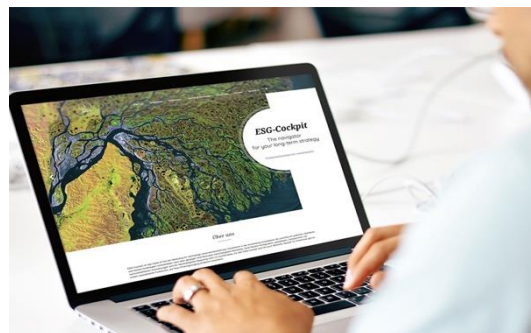

- Development of supplementary **calculation logics** for sustainability indicators
- Comprehensive **sustainability strategy consulting**
- **Sustainability reporting**
- **Life cycle analyses, emission factors**

## The ESG Cockpit profile

### *The ESG Cockpit team has ...*

- more than 20 years of experience in sustainability & digitalization – always dedicated and focused on this topic
- more than 20 members in an interdisciplinary setup covering all competencies in-house
- partnerships with research institutions and other competence organizations as for example the Federal Environment Agency Austria for emission calculations, sustainability consultants and providers of related systems such as ranking / scoring, energy management (sensor data connection), AI-based systems and legal data banks.

### *ESG Cockpit is ...*

- a mature and tested product already 10 years on the market – the development started in 2012 before the market even emerged based on changing requirements to make sustainability ambitions transparent
- equipped with practical experience from working with well over 1,000 users
- a solution operating in accordance with the highest data security standards – data only accessible by the respective customer organization
- flexible on the input side, so that ESG data management can be expanded step by step on the one hand and conducted across standards and industries on the other hand
- based on a multi-standard principle on the output side and not statically aligned to a single reporting system
- structurally logically designed and thus quickly extensible and open for all future standards
- an open system, that allows all data exports in a wide variety of formats that can be further processed (e.g., reports as docx files, tables as xlsx files, several graphic formats)
- equipped with a flexibly adaptable interface construction kit (xlsx/csv, APIs) to retrieve data from a wide variety of source systems and also feed back into such
- flexibly configurable for all industries and, if necessary, open for industry-specific additional module development and integration
- possibly multi-client and white-label capable for group-based offers
- both easily applicable as software as a service (private cloud, DACH locations) via web browser and installable in-house

### *ESG Cockpit will ...*

- soon be equipped for work according to CSRD/ESRS
- continuously expand interfaces and functionalities, while responding to user preferences
  - o e.g., newest emission factors, for an increasing data spectrum
  - o e.g., Scope3 functionality, also with ML-Engine ProNawi, step by step
  - o e.g., include benchmarks/scores for easier assessment of ESG progress
- always stay up to date in terms of security (e.g., authentication options, SSO etc.)
